

TFTP Project Report

Student Name: Potnuru Tanmai

Batch Number: 25028

Project Title: TFTP (Trivial File Transfer Protocol)

1. Objective

To implement a TFTP application in C that transfers files between a client and a server using UDP.

2. Introduction

TFTP is a simple file transfer protocol that operates over UDP. It is commonly used for transferring configuration files and boot images in embedded systems and networks.

3. Features

- File upload and download
- UDP socket communication
- Read and Write request handling
- Data and ACK packet exchange
- Error handling

4. Technologies Used

Programming Language: C

Platform: Linux

Protocol: UDP/TFTP

5. Files Included

Source code (.c/.h)

Project report

Output screenshot

6. Conclusion

The project demonstrates reliable file transfer using the TFTP protocol and provides hands-on experience with socket programming and network communication in C.
